When President Ellen Johnson Sirleaf became president, one of her many pleas to Liberians was to venture into the sciences. By this she meant that if Liberia is to be built, it should be done by Liberians who are qualified in those areas.

Heeding to her call, the Liberian Djar Association decided to establish Liberia's first technical college---The Liberia Djar Technical College---which is located in the township of Kebab, Barnesville Township. The college, according to its Public Relations Officer, O'neal Essomba Roberts, is offering certificate and associate degrees in mechanical engineering, electricity, general construction, professional nursing and agriculture for the ongoing semester.

Upon graduation, he says, students will contribute to the nation's reconstruction and recovering process. A visitor to the college was shocked by what he saw: Liberia's next generation of electrician having classes on hydroelectricity.
